Attorney Docket No. 15-046

JUN 15 2007

**LISTING OF CLAIMS:**

The following listing of claims replaces all previous versions, and listings of claims in the present application.

1. (Currently Amended) A power supply device for supplying electric power to an electrical circuit, the power supply device comprising:
  - a power source;
  - a first divider resistor connected between the power source and a divider node;
  - a second divider resistor connected between the divider node and ground;
  - a voltage comparator connected to the ~~power source~~ divider node for comparing a divided voltage at the divider node with a reference voltage and for outputting a control signal when the divided voltage is higher than the reference voltage; and
  - a protecting switch disposed in a circuit between the power source and the electrical circuit, the protecting switch being turned off when the control signal is supplied from the voltage comparator to the protecting switch, thereby protecting the electrical circuit from overvoltage.
2. (Original) The power supply device as in claim 1, further comprising a voltage booster for boosting the power source voltage to a predetermined voltage level, the voltage booster being disposed in a circuit connecting the power source and the electrical circuit.

Serial No. 10/784,199

Attorney Docket No. 15-046

3. (Original) The power supply device as in claim 2, wherein:

the protecting switch is disposed between the power source and the voltage booster.

4. (Original) The power supply device as in claim 2, wherein:

the protecting switch is disposed in the voltage booster.

5. (Original) The power supply device as in claim 2, wherein:

the protecting switch is disposed between the voltage booster and the electrical circuit.

6. (Currently Amended) ~~The~~ A power supply device as in claim 4, wherein for supplying electric power to an electrical circuit, the power supply device comprising:

a power source;

a first divider resistor connected between the power source and a divider node;

a second divider resistor connected between the divider node and ground;

a voltage comparator connected to the divider node for comparing a divided voltage at the divider node with a reference voltage and for outputting a control signal when the divided voltage is higher than the reference voltage;

a protecting switch disposed in a circuit between the power source and the electrical circuit, the protecting switch being turned off when the control signal is supplied from the voltage comparator to the protecting switch, thereby protecting the electrical circuit from overvoltage; and

Serial No. 10/784,199

Attorney Docket No. 15-046

a voltage booster for boosting the power source voltage to a predetermined voltage level,  
the voltage booster being disposed in a circuit connecting the power source and the electrical  
circuit,

wherein the protecting switch is disposed in the voltage booster,

wherein the voltage booster comprises a booster coil, a booster switch for switching current flowing through the booster coil at a high speed, and a rectifying diode for allowing current to flow only in one direction from the booster coil to the electrical circuit; and

wherein the protecting switch also functions as the rectifying diode.

7. (Original) An airbag system for use in an automotive vehicle, the airbag system having an airbag to be inflated with gas upon detection of a collision and an igniting circuit for igniting a device for generating the gas, wherein electrical power is supplied from the power supply device defined in claim 1 to the igniting circuit.

8. (Previously Presented) The power supply device as in claim 1, wherein at least one of the first divider resistor and the second divider resistor is a variable resistor.

9. (Previously Presented) The power supply device as in claim 1, further comprising a reference voltage source for providing the reference voltage.

10. (Previously Presented) The power supply device as in claim 9, wherein the reference voltage source is a variable voltage source.

Serial No. 10/784,199

Attorney Docket No. 15-046

11. (New) The power supply device as in claim 6, further comprising a voltage booster for boosting the power source voltage to a predetermined voltage level, the voltage booster being disposed in a circuit connecting the power source and the electrical circuit.

12. (New) The power supply device as in claim 11, wherein the protecting switch is disposed between the power source and the voltage booster.

13. (New) The power supply device as in claim 11, wherein the protecting switch is disposed in the voltage booster.

14. (New) The power supply device as in claim 11, wherein the protecting switch is disposed between the voltage booster and the electrical circuit.

15. (New) An airbag system for use in an automotive vehicle, the airbag system having an airbag to be inflated with gas upon detection of a collision and an igniting circuit for igniting a device for generating the gas, wherein electrical power is supplied from the power supply device defined in claim 6 to the igniting circuit.

16. (New) The power supply device as in claim 6, wherein at least one of the first divider resistor and the second divider resistor is a variable resistor.

17. (New) The power supply device as in claim 6, further comprising a reference voltage source for providing the reference voltage.

Serial No. 10/784,199

Attorney Docket No. 15-046

18. (Previously Presented) The power supply device as in claim 17, wherein the reference voltage source is a variable voltage source.
